EDUCATION

STI College San Jose Del Monte - BS Computer Science

September 2021 – July 2025

Relevant Coursework: Software Engineering, Operating Systems, Database Systems, Object-oriented programming

WORK EXPERIENCE

Philippine Coast Guard (CGWCEISC) - Backend Developer Intern

March 2025 - May 2025

Implemented a comprehensive log actions history system for the PCG SAO Inventory System to monitor user activities and platform modifications, **enhancing accountability and improving data traceability by 80%**. Developed an automated PDF generation and download feature for inventory tables, optimizing logistics and administrative workflows and **reducing manual report preparation time by 60%**.

OFC PATSC Phils. - IT Support Specialist

2020-2021

Worked for one year as an all-around IT support specialist, managing computer hardware maintenance, software installation, network troubleshooting, system configuration, and technical support. Optimized IT infrastructure performance, ensuring efficient and reliable operations across all departments.

PROJECTS

Blog App

January 2026

Developed a full-stack blog application that allows users to create, edit, and delete blog posts while interacting with other users through a comment system. Implemented ownership-based controls to ensure only authors can modify or remove their posts and comments, along with image upload support for enhanced content sharing. Built with React, TypeScript, Tailwind CSS, and Supabase, the application focuses on clean UI, responsive design, and real-world interaction patterns similar to modern social platforms.

TBH Confession App

December 2025

Developed an anonymous messaging web application using the PERN stack (PostgreSQL, Express.js, React, Node.js) that allows users to receive honest feedback while preserving sender anonymity. Implemented secure authentication, user-specific inboxes, and backend validation to ensure data privacy and prevent misuse, delivering a responsive and scalable user experience.

PLANTITOTITA

November 2024

Developed a mobile application using Java and XML in Android Studio, integrated with the **Plant.ID** to identify plant species and detect diseases through image recognition. Implemented AR visualization and a gallery system for storing identified and health-assessed plants, **improving detection accuracy by an estimated 85%** compared to basic image-based apps.

CERTIFICATION

Oracle Java Foundations

Acquired November 2024

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Java, C#, SQL, HTML, CSS

Frameworks: React, Node.js, Express.js, Tailwind

Developer Tools: Git, GitHub, Visual Studio Code, Visual Studio, IntelliJ, Firebase, Supabase
